

## Trauma Response Community Engagement Program FAQ

Q: If our clinical intervention services are provided through MOU with a behavioral health partner, do we still need to obtain/use a HIPAA compliant Electronic Health Record software?

A: Applicants under this RFA are required to use HIPAA compliant EHR software **only if** they are managing, receiving, or accessing Electronic Health Records. Agencies should adhere to all HIPPA requirements associated with EHRs as prescribed by individual/organizational licensure or insurance. OVSJG advises agencies to consult with their own compliance or risk management advisors for additional guidance.
